

Stokesley School

Physicist of the Year award

Congratulations to Rowan in Year 10 who, earlier this week, was presented with the Schools' Physicist of the Year award at Durham University! The award is open to Y10 and Y12 students and is nominated by teachers and Rowan was one of a number of students from across the North East region who received the award.

Rowan and her parents attended the celebration event at Durham University where first year undergraduates showcased "Bridge Projects" - projects that they have been challenged with to complete their first year of studies in physics. Award winners were able to discuss with the current Durham University students their work and what it is like to study physics at university. The Ogden Trust is a charity which supports schools, projects and programmes that are committed to enhancing physics teaching and learning. The Science Department, and the rest of the school, would like to say a huge well done Rowan on this fantastic achievement!
